Media education

Deutsche Version | **Weingarten model**

Competency

Media education

Media education focuses on promoting the digital-related skills of learners. Incoming teachers can help learners develop skills that are necessary for responsible use of digital media. It is about the development of students in dealing with digital media, through the communication of responsible use of new technologies, critical discussion with media and attention to digital ethics.

The following structure can be found in the field of media education:

Media competencies

-Media competency/training

Application competencies for information technology

This area demonstrates the skills that teachers are useful to teach students to deal with digital technologies.

-Media projects

-Media use

-Communication rules for digital interaction

-Role play in media-based education

Problem-solving competence

Students should be taught how to use digital media and the risks involved so that they can act safely and responsibly.

-Media and data awareness

-Communication culture

-capability to select

-Media effect

-Information technology

Tagging

Media competency, pupil education, digital ethics.
